

## LED Pen Rectifier

The main advantages of the LED Pen Rectifier are its continuously adjustable voltage and the clear, illuminated LCD display.

This makes it very easy to see exactly how much power you're using and to therefore stay in tight control over the pen plating process.

### Other benefits include

- Very compact size - takes up minimal bench space
- Flip-out feet - makes LCD clearer

### front view

Red output socket - positive

Black output socket - negative

Easy to adjust knob for controlling voltage

Back-lit digital display

### back view

On/off switch

### Specifications

1.5v-v30Vdc / 1A

Selective rose gold and white palladium pen plating

## COMPACT

*and easy to use...*

You'll find that the LED Pen Rectifier is an ideal power source for pen plating.

Together with our Pen and Beaker Stand, it makes an invaluable piece of kit for jewellery making, small electrical repair jobs or even scientific work.

To see the many possible applications, click [HERE](#) to download our manual and take a look at our [Pen Plating Supplement](#).
